IN THE SPECIFICATION:

Please replace the paragraph extending from page 9, line 26 to page 10, line 3, with the following new paragraph:

If the official response is not updated, the surveillance code may return the same OR to a partition multiple times. For example, operating system 234 may determine that service processor 220 is in error and update OR 250. Surveillance code 260, on a subsequent probe by operating system 234, may determine that the service processor is in error and return the official response. However, because [[they]] the OR can only be either "good" or "bad", the partition may report the same error to its operating system multiple times.
